

HEALTHeLINK Medication History Query Overview

Medication history query in HEALTHeLINK will bring results from two different data sources:

1. **Selected Surescripts retail pharmacies.** The query will list all prescriptions *filled* for that patient at these pharmacies regardless of payment method. (For more detail, see page 2.)
2. **Claims data from PBMs (Pharmacy Benefit Managers) associated with the Surescripts Network.** This would include only those prescriptions that were paid for by the patient's insurance plan in the last 13 months. (For more detail, see page 2.)

Surescripts Retail Pharmacy Data- Only Retail pharmacies affiliated with the Surescripts Network supply medication history data. This history indicates that the pharmacy filled the prescription, but does not indicate if the script was picked up. **The method of payment is irrelevant; all prescriptions filled in these participating pharmacies will be reported including scripts paid by cash and Medicaid. The participating pharmacies are:**

AHOLD	Rite Aid
Albertsons	Safeway
CVS	Supervalu
Kerr Drugs	Walgreens
Target Pharmacy	

*Additional pharmacies are being added by Surescripts

The resultant data in a medication history query will vary depending on the pharmacy sending the information.

RxHub Data - Supplies medication insurance claims history from payers and Pharmacy Benefit Managers. The following lists the current PBMs that contribute to RxHub:

AETNA	Express Scripts	RxAmerica
Argus	IDNA	Rx Solutions
Caremark	INH	Walgreens Health Initiative
Excellus	Medco	WellPoint

*These PBMs service about 93% of the insurance plans in Western New York.

Medications processed through a PBM not on the list, would not be included in the RxHub data. Examples of possible excluded scripts are those paid for in cash, Medicare/Medicaid and V.A. scripts.

Though content sent by the pharmacy may differ depending on the sending pharmacy, the minimum data set requirement includes: SIG, quantity/days and filled date.

Note: There will be duplicate prescriptions listed in the query results if the data is contained in both RxHub and the Surescripts retail pharmacy data. The vendor is currently working to resolve this duplication.
